

Data Security in Zeiten wachsender Cyber- Bedrohungen

Mario Zimmermann

Regional Director Austria

Veeam Software

Understanding cyberattacks

Information is gathered on the victim's people, processes and technology in play

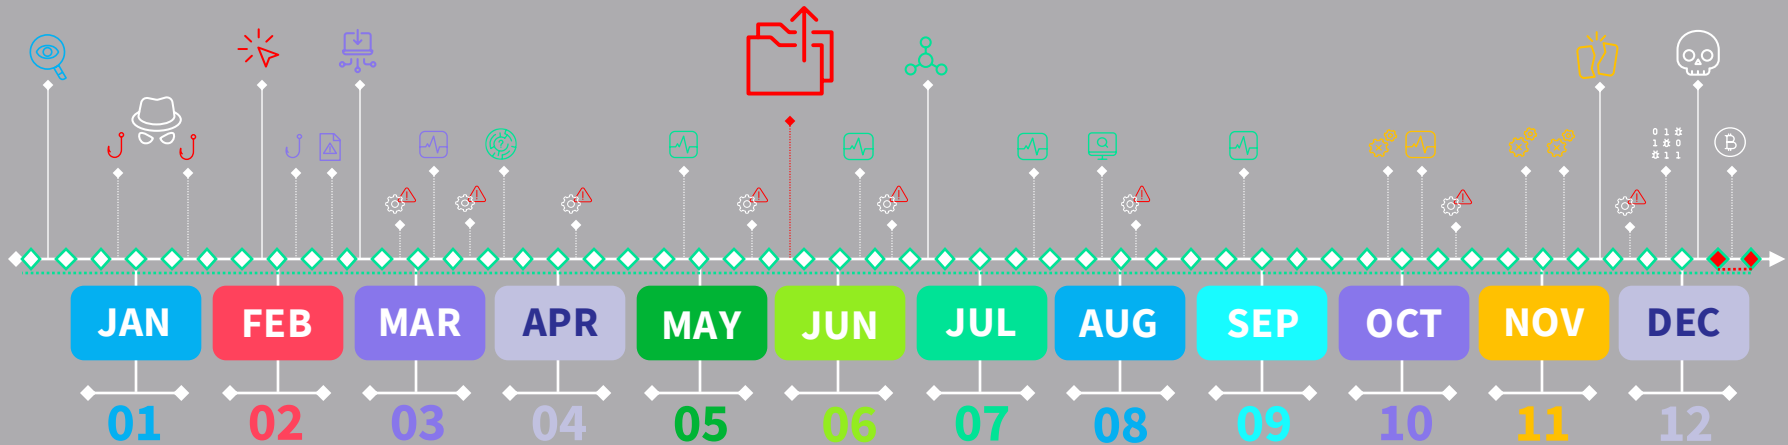

Gain access to the victim by sending phishing emails and let them click a link

Creating a base of operations and let's make it redundant and highly available

Snooping around without being detected and compromise higher value targets

Alter routines, documentation and security systems to reduce/deny restore capabilities

Encrypt victim's data, wipe archives/backup/data, issue ransom demands!

 BACKUP  MALWARE/TOOLS

Veeam to Jointly Develop AI Solutions with Microsoft for Industry's #1 Data Protection and Ransomware Recovery Platform

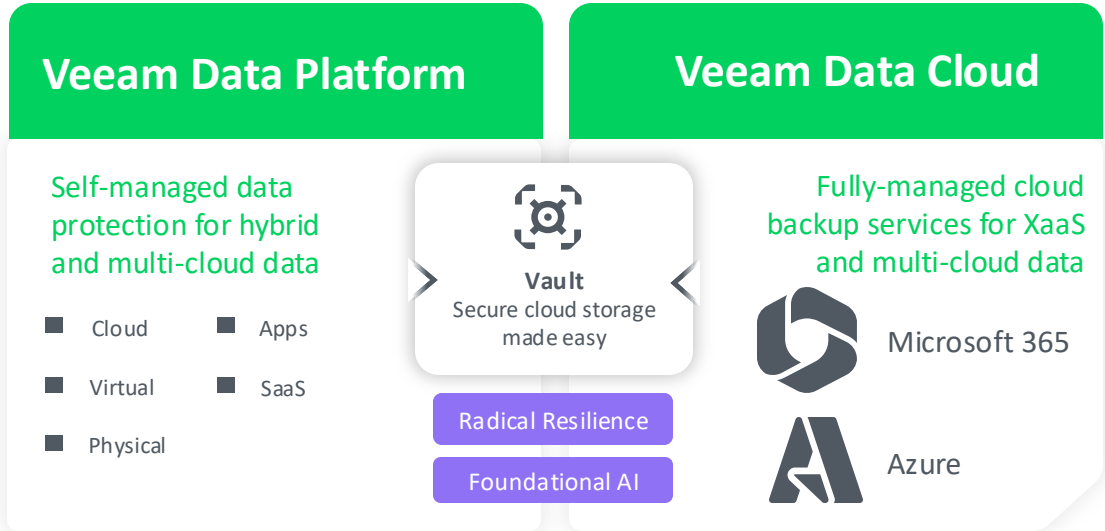

Microsoft

+

Introducing Veeam Data Cloud

Introducing Veeam Vault

A secure cloud storage resource on Azure that eliminates the headaches of managing infrastructure and unpredictable cloud cost models.

Veeam Data Platform

Self-managed data protection for hybrid and multi-cloud data

- Cloud
- Virtual
- Physical
- Apps
- SaaS

Vault
Secure cloud storage
made easy

SECURE

Zero Trust done for you with always immutable storage, logically air-gapped from your production environment

EASY

Access and use on-demand, fully-managed storage with zero config, management and integration complexities

PREDICTABLE

Eliminate bill shock with simple per-TB pricing, inclusive of API calls, restore and egress charges

The Veeam logo is displayed in white lowercase letters within a white-outlined rectangular box with rounded corners. The box is centered horizontally and partially overlaps a large, faint, light-green abstract shape in the background.
